A Norican Technology

# The intelligent investment

## Powering team performance

When you buy the best equipment, naturally you want highly skilled personnel to manage it. But those skills aren't always easy to find.

DISA Training educates your employees in machine operation, maintenance and troubleshooting. They can learn from the same specialists who created your DISA equipment, mixing theoretical classroom tuition with practical hands-on training on your own moulding lines. Benefits include better casting quality, reduced downtime and increased parts lifetime, with lower maintenance and overall costs.

The end result? An expert workforce that knows your machinery inside out – and substantial returns from your training investment.

## Realise your full potential

DISA Training produces competent and confident staff, motivated to drive your business forward. With more experts on your team, you can apply best practice working techniques, adopt the latest technologies and optimise machine settings to suit foundry processes.

- Empower your workforce: well-trained staff can work in teams or independently with less supervision
- Higher job satisfaction translates to greater loyalty and makes recruitment easier
- Troubleshoot quickly, with fewer line stoppages and more uptime

## Training that fits your needs

DISA offers a range of training courses to suit new or existing customers.

Courses range in length from days to weeks. They can be delivered at your location or at DISA's headquarters in Taastrup, Denmark.

DISA Training options include:

- Standard and tailor-made courses
- Advanced tuition for experienced maintenance staff
- Combined training courses and service visits
- Final exam and certificate to verify learning

# Training your team

## Build your perfect training course

DISA Training can cover every topic an operator or maintenance technician needs to know. Mix and match subjects to create courses that meet your exact foundry requirements.

- Operating techniques and working principles
- Moulding machine production settings
- Hydraulic, pneumatic and electrical systems
- Safety procedures
- Preventive maintenance
- Systematic troubleshooting

We can also train your staff in the optimal operation and maintenance of additional DISA equipment such as:

- Transport systems (AMC/PMC/SBC)
- Core-setter (CSE)
- Pattern changer (QPC/PPC/APC)
- Other performance-enhancing upgrades (Shuttle, Robot, MAC, MOC, etc)

## Benefit from DISA's global support

DISA Training is offered through DISA's global Aftermarket network. Other customer services include:

- Spare parts: original spare parts swiftly supplied from regional warehouses
- Hotline: 24/7 telephone support
- Field service: global onsite service support with rapid response from local teams
- Upgrades: enhance your process with the latest DISA technology
- DISA TOPS (Total Optimisation Production Services): an exclusive customer inspection, service and maintenance programme that ensures peak performance
- Remote Monitoring Service: expert engineering oversight of DISA moulding lines
- DISA Application Services: specialist consultancy and advanced training for skills like mould layouts and process control.

## Creating your experts
